

ShopEase Payment & Refund Policy

Customer Support Knowledge Base | Policy Version 1.0 | September 2026

1. Overview

ShopEase supports several payment methods for online orders. Payment availability can vary by country, device, product, seller, and order value.

A payment is considered successful only after ShopEase receives confirmation from the relevant payment provider. A bank or card statement showing a temporary authorization does not always mean that the order has been successfully paid.

Customers should keep their order confirmation and payment reference available when contacting support.

2. Accepted Payment Methods

- Credit and debit cards
- Online banking and supported bank transfers
- Digital wallets supported at checkout
- Approved ShopEase account credit or gift balance
- Other payment methods displayed on the checkout page

3. Payment Authorization

When a customer submits an order, the payment provider may temporarily authorize or reserve the amount before the transaction is completed.

If an order fails before payment is captured, the temporary authorization may be released automatically. The time for the amount to become available again depends on the bank or payment provider.

Customers should avoid repeatedly submitting the same payment if they are unsure whether the first attempt succeeded. They should first check the order status and payment confirmation.

4. Failed Payments

A payment may fail because of an incorrect card detail, insufficient funds, bank restrictions, expired payment credentials, security checks, network problems, or a payment-provider error.

If payment fails, the order may remain unpaid or may be cancelled automatically. Customers can normally retry using the same or another supported payment method.

If the customer was charged even though the order shows as failed, support should verify whether the charge is pending, captured, reversed, or refunded before advising the customer.

5. Duplicate Charges

Customers who believe they were charged twice should not immediately make another payment. Support should compare the order number, transaction references, timestamps, and payment status.

Sometimes one transaction is a completed charge while another is only a temporary authorization. Temporary authorizations may disappear automatically.

If two completed charges are confirmed for the same order, ShopEase should investigate and arrange the applicable correction.

6. Refund Eligibility

A refund may be issued when an eligible order or item is cancelled, returned, rejected after inspection, or otherwise qualifies for a refund under ShopEase policy.

The refund amount depends on the applicable order terms. Shipping charges, discounts, promotional credits, taxes, or return fees may affect the final amount.

A refund request does not necessarily mean that the refund has already been processed.

7. Refund to Original Payment Method

Where possible, refunds are sent back to the payment method originally used for the purchase.

For card payments, the refund is normally sent to the same card or underlying account. For digital wallets or other providers, the provider's own processing rules may apply.

ShopEase generally cannot redirect a refund to a completely unrelated payment method without an approved exception.

8. Refund Processing Time

After a refund is approved, ShopEase initiates the refund. The time until the money appears in the customer's account depends on the payment provider and bank.

A customer may therefore see a refund marked as processed by ShopEase while the bank statement still does not show the funds.

If the stated processing period has passed, the customer should provide the refund reference or transaction details so support can investigate.

9. Partial Refunds

A partial refund may be issued when only part of an order is returned, when a pricing adjustment is approved, or when the applicable policy requires a deduction.

For discounted orders, the refund may reflect the discount allocation rather than the original full item price.

10. Refunds for Cancelled Orders

If an order is cancelled before payment is captured, there may be no completed payment to refund. A temporary authorization may instead be released by the payment provider.

If payment was already captured, ShopEase initiates the applicable refund after cancellation is confirmed.

11. Refund for Returned Products

For returned products, the refund process normally begins after the returned item reaches ShopEase or the applicable seller and passes any required inspection.

The customer should not assume that the refund is issued when the parcel is picked up. Pickup, receipt, inspection, approval, and refund are separate stages.

12. Promotional Credits and Discounts

Refund calculations may be affected by coupons, promotional discounts, account credits, free gifts, bundles, or other special offers.

When only one item from a discounted order is returned, ShopEase may recalculate the discount before determining the refundable amount.

13. Payment Security

ShopEase support should never ask customers to send full card numbers, CVV/security codes, passwords, one-time passwords, or banking login credentials through chat.

If a customer reports suspicious activity, the account and payment provider should be reviewed through the official security process.

14. Frequently Asked Questions

Can I change my payment method after placing an order? Normally, payment details cannot be changed after payment is completed. If the order supports cancellation, the customer may cancel and place a new order.

Why does my bank show a charge when my order failed? It may be a temporary authorization. The bank or payment provider determines when it is released.

How long does a refund take? ShopEase initiates approved refunds according to policy, but the final posting time depends on the payment provider and bank.

Can my refund go to another card? Refunds are generally sent to the original payment method. Exceptions require review.

I was charged twice. What should I do? Do not pay again. Provide the order and transaction details so support can determine whether one charge is only an authorization or whether two completed charges occurred.

15. Chatbot Guidance

The chatbot should collect the order number, payment method, payment status, transaction date, and relevant error message before giving a specific answer.

The chatbot should distinguish between pending authorizations, successful payments, failed payments, and completed refunds. It should never invent a refund date or claim that money has been received when the payment provider has not confirmed it.

16. Policy Priority

This document provides general payment and refund guidance. Product-specific terms, seller-specific rules, promotional terms, and information shown on the customer's order may override the general guidance.

When a system record provides a confirmed payment or refund status, the chatbot should use that record rather than relying on assumptions.
